What's new in this version: There are some improvements and fixes in this release. What's new: There are some improvements and fixes in this release. A Mixere document consists of a number of tracks, each containing a single audio file. Any number of tracks can play simultaneously, subject only to the limits of Windows and sound card performance. Audio is streamed directly from disk, so there's no limit on audio file size, and no waiting for audio to be loaded into memory. Mixere's interface is similar to a spreadsheet. The rows are tracks, and the columns are properties which can be adjusted for each track: name, transport (play/pause/stop/loop), mute/solo, volume, pan, pitch (+/- one octave), and audio position. More features and tools A Mixere document consists of a number of tracks, each of which potentially contains an audio file. A track must be loaded with an audio file before it can be used. It's also possible to edit a track slider (volume, pan, pitch, or position) in multiple tracks at once. The crossfader allows you to fade back and forth between two documents. Mixere allows you to take snapshots of a document. A snapshot is a recording of the state of every track in a document, at a particular moment. A snapshot can be restored, which means the tracks revert to the state they were in when the snapshot was taken. All in all, X
