## Thinapp Archive Unpack

Extract by VMWare Thinapp! . When extracting a fairly large (old backup) \*.dix archive, the "time limit of 300 seconds" is a problem because extraction time is very long. This restriction, in my opinion, should not be applied and to fix it, you need to create your own, such as in "Remoting", but this requires additional steps, so I discard this option and leave it as an alternative ... And now, after I got rid of the "300 sec" limit, I can say with confidence that for large programs that contain thousands of lines, the extraction time is no more than 10 minutes! dd2bc28256
