Microsoft Toolkit 2.6.7 activator for Windows 10, office 365 Microsoft Toolkit 2.6.7 activator for Windows 10, office 365. It is due to Windows 10 does not allow the Microsoft Office Toolkit to conduct.

Q: Can a workflow just run a VBScript? I have a workflow process and it runs perfectly fine when it runs a workbook VBA macro. When I add it as a VBScript it runs with no errors but it never finishes the workflow (even after many hours). If I run it through VB it runs perfectly fine though. Any ideas would be great! Here is my code: If CheckForRecurringDonations Then Call SendRecurringDonationNotifications Application.Wait (Now + TimeValue("00:00:01")) GetSeedData End If A: You might want to add a (simply) "sleep" before calling the VBScript code (at the first line). In fact, from the documentation, there's nothing special concerning execution of VBScript files: Procedures that begin with the character "vb," such as VBScript, cannot be put in a property. Then, I think that there is no consensus on why this does not work, but I can mention a few possibilities: If you try to run an Office Application that contains workflows with a VBScript, then this script (i.e. the vbScript) is called BEFORE the Office Application starts (as you say). Then the VBScript has no access to the Application object. 79a2804d6b
