Weighing in at a mighty 860MB, Lightroom 5 looks to be the most significant update to the Lightroom line of programs so far. By my estimates, this new release still has a way to go before Adobe catches up to the latest release of the nominator, namely Photoshop CC 2014. While Photoshop CC 2014 is zippier than before, there are still no such promises for Lightroom 5. Nevertheless, Lightroom 5 is still a worthy update to Lightroom 4.3. Shutterstock publishes a photograph of the day, frontally, to represent every day. It's a good example of how a photograph can be used in a different, interesting way each day. You can also find Flash drives embedded inside, using which you can discover the new day's scene. If you have a spotty internet connection, the program will bring back the day's photograph when you get online again. A great deal of thought has gone into Snaps—especially the new smart snapping feature. A head-mounted camera allows you to swipe your hand along the screen's surface to trigger the location of the desired photo. You can also do it with Windows 8's map function using a finger or your smart phone.
