The most noteworthy feature in Photoshop CS5 is the “Content Aware Scaling” that’s been present in the best alternative photo editing programs for a while now. It is a great tool for people with very critical eyes (laughs). It has been introduced in this version more or less permanently. This requires a new and different mindset to me, but if you’re the kind of person who occasionally needs or wants more fine-tuned control over how images are edited, you may like this feature. Another change is the organization of folders and the order the folders are opened. The first tab, “1. Files,” opens the Archive folder automatically if it is not opened. This is the default order we always want to make sure our files get opened. Also, the Library is now the default folder for images. Here are 12 of the best features in Photoshop CC 2018 that makes it a must have tool for any photo editors:

- 1. Batch Processing - You can save many types of adjustments (Pixelate, Despeckle, Brightness, Contrast, Posterize, Image cleanup, Emboss, Sharpen, Oil and Water, Auto Level, etc.). Organize your Adjustment Layers without having to create each one manually.
- 2. Layers Panel - Layers help you organize your images and create different effects very easily.
- 3. The History Panel - This panel allows you to take the selected edit back to earlier stages. Bring your changes back to the precise moment where you made them.
- 4. Smart Objects - Smart Objects allow you to combine any image and text to make print ready or for advanced work such as producing physical products.
- 5. Camera Raw - If you are an amateur then you can simply ignore this tool. If you are an expert designer then there might be a chance that you will find a guest star with this new feature that will make you a pro photographer.
- 6. Adjustment Panel - This panel will help you make very easy and faster adjustments on your photo. You will be able to create a collection of presets in a few clicks.
- 7. Content Aware Move - This tool will allow you to place just one object on a photograph. They also have a magnificent random option too.
- 8. New Camera Batch - This option makes it easy for you to process your photos in a real-time like menu view. You can adjust several images without opening each and every photo in an editor.
- 9. Refine Edge - In another amazing refinement, you can select and fine-tune your photo’s corners and edges. This tool will include the newly-available rectangular selection and mask.
- 10. Content Aware Fill - With this brilliant enhancement, you can fill images with content. This new content aware tool fills the blank areas with elements or objects even it requires one or more crops.
- 11. New Merge - Merge dialog has been redesigned so that, with one click, you can merge your multiple images into one scene.
- 12. Painting Brush - Now you can paint any color or pattern on your layers which you can later use for sharing across social media or for creating unique designs.
